

Vishank Singh

Email: singhvishank20@gmail.com | GitHub: vishank020 | LinkedIn | Phone: 7304207818

Skills

Languages: Python, JavaScript

Frameworks: React.js, FASTAPI

Tools & Platforms: Git, Docker, Firebase, GitHub Actions

Databases: MySQL, PostgreSQL, MongoDB

Experience

AI and Software Developer Intern, Rusaka Technologies

December 2025 – January 2026

React.js, Python, REST APIs

- Developed and maintained frontend features using React.js and backend services using Python within an existing production workflow.
- Built reusable and responsive UI components integrated with REST APIs to support dynamic application functionality and improve frontend maintainability.
- Debugged frontend and backend application issues to improve responsiveness, functionality, and overall user experience.
- Collaborated with developers during feature refinement, issue resolution, testing, and deployment-related workflows in a team environment.

HR Intern, Junoon Foundation

May 2024 – June 2024

- Assisted in volunteer onboarding and coordination activities for educational outreach initiatives.
- Maintained volunteer participation records and supported internal HR coordination workflows.

Open Source Contributions

Contributor, TCET-ACM-SIGAI Open Source

Git, GitHub, Collaborative Development

- Contributed to collaborative open-source initiatives by working on code improvements, issue resolution, and feature enhancements.
- Worked with Git and GitHub workflows including branching, pull requests, code reviews, and version control practices.
- Maintained clean, reusable, and documented code contributions while collaborating in team-based development environments.

Projects

Crop Disease Detection using CNN

GitHub | Kaggle

Python, TensorFlow/Keras, Scikit-learn, NumPy, Matplotlib

- Developed a Convolutional Neural Network (CNN) model for crop disease classification using the PlantVillage dataset.
- Built an end-to-end deep learning pipeline including dataset preprocessing, augmentation, model training, evaluation, and checkpoint management.
- Trained and evaluated the model across 15 crop disease and healthy plant classes covering pepper, potato, and tomato categories.
- Achieved 66.33% test accuracy with a test loss of 1.658 while evaluating classification performance using confusion matrices and precision/recall metrics.
- Organized experimentation workflows using Jupyter/Google Colab notebooks with modular project structure and documented training workflows.

FinCoachAI - AI-Powered Financial Coach

GitHub

Python, React.js, AI/LLM APIs

- Designed and developed an AI-powered financial assistant focused on budgeting, saving, and financial planning guidance.
- Built a conversational query-processing workflow using AI/LLM APIs to generate contextual financial recommendations.

- Implemented structured input handling and validation workflows to improve response consistency and reliability.
- Developed a modular frontend and backend architecture to support future integration with external APIs and scalable feature expansion.

Automated CI/CD Pipeline with GitHub Actions

GitHub

GitHub Actions, Python, Git

- Designed and implemented an automated CI/CD pipeline for a Python-based application using GitHub Actions.
- Automated linting, testing, build validation, and deployment workflows to streamline pull request validation and reduce repetitive manual tasks.
- Configured continuous integration workflows on pull requests and continuous deployment workflows on merges to the main branch.
- Improved development workflow efficiency through automated testing and deployment orchestration.

Tic Tac Toe - Play with AI

GitHub

Python, Streamlit

- Developed an interactive Tic Tac Toe web application using Streamlit with both Player vs Player (PvP) and Player vs Computer (PvC) modes.
- Implemented an AI opponent using the Minimax algorithm to generate optimal gameplay decisions.
- Optimized AI decision-making performance using Alpha-Beta pruning to reduce unnecessary computations and improve response time.
- Applied modular software design principles to separate game logic, AI workflows, and user interface components.

Education

B.Tech in AI & ML,

Thakur College of Engineering and Technology, Mumbai

CGPA: 7.73/10

Expected Graduation: 2027
